In my opinion, working with a larger company would be preferable over the small companies. The reasons for the preference of working in a larger company over the smaller one are as follows:

1. Large companies have a large scope and tie ups.
2. Large companies have a lot of global exposure
3. They have huge economies which cannot be easily shaken during the time of recession
4. The amount of work load would be comparatively lesser when compared to the smaller scale companies
5. They have top of the notch technologies at their disposal to get the tasks done.
6. The scope of travelling to a different country is also higher.
7. There are wide ranges of domains which can be helpful in learning newer technologies.

To sum it up, the number of pros in the favour of working with a larger company is far higher than that of the smaller company. Hence, I prefer working at a larger company.

Introduction:

In my opinion, working with a larger company would be preferable over the small companies. There are many reasons for my preference. One of the reasons is that the large companies are robust in terms of their economy.

Body:

S: There are significant advantages of working at a large company.
E: Firstly, large companies have a large scope and tie ups because of which there's a lot of global exposure. Secondly, the large companies have comparatively lesser work load than that of a large company. And, finally, they have top of the notch technologies at their disposal along with wide range of domains
Ex: Working in large companies is beneficial as they do not take much of an impact during the crisis. For Example, during the global crisis of 2008, large companies such as Google and Microsoft were barely impacted due to the crisis.
I: Larger companies provide onsite offers which are very important for the professional growth.

Conc:
To sum it up, the number of pros in the favour of working with a larger company is far higher than that of the smaller company. Hence, I prefer working in a larger company.

The intellectual benefits of attending a university or college are vastly overrated: most people could learn more by studying and reading on their own for four years than by pursuing a university or college degree.

Colleges and universities offer vast variety of courses out of which few are easy and few are hard to understand. Students attending college gains a lot from the experience of the teachers. A self-educated person can hardly learn more. I prefer to attending college or universities for learning.

While learning a particular subject by our own when we don't understand something we just leave it but if we are a college or a university we can take help of our teachers or fellow students. We definitely need help to learn. Moreover, attending college and university has also impact on your personality. People can learn many social things like how to cooperate and compete with your fellow mates. Person can developed his communication skill which will be helpful in future life.

University or college provide us with a systematically designed curriculum for students. I find myself benefited much from my teachers and friends. They helped me solve the problems I didn't understand.
it can be concluded that there are so many benefits to studying at colleges and university then by own. People can enhance their personality, develop communication skill, make a friend circle, enhance the contacts and many more things which is not possible by studying by their own.

Intro:
Colleges and universities are often considered as quite overrated. According to me, colleges and universities are indeed overrated. There are few but quite strong reasons as to why colleges and universities are considered to be over hyped.

Body

S: There are cons in the colleges and universities because of which we can state that they're over hyped

E: The colleges charge huge sum of money for the education they provide. These courses can also be pursued from other institutes where they charge almost half the price. Also, there is not much of flexibility offered by the universities.
